Value of Good Seeds

TO THE PLANTER it is a well-known fact that **Seeds** to be sown for a dependable crop must, at the beginning, be **Fresh** and of the **Highest Quality**. Our Seeds (and in fact all merchandise offered by us) stand this test. Nothing is more provoking and disappointing than after time, labor and money spent, one finds his attempts futile. The price of **Seed** is poor policy to be guided by—all **seeds grow**, even those of the weed-producing varieties, but what they will **produce** is the vital point. Since our entering into this important channel of agriculture, it has been our constant aim to put on the market only such varieties as we know will give the very best results. Vast amount of **Time, Money** and **Touring** through this and foreign countries, examining growing crops, has been required to procure what we offer in this catalogue. They are the **Best Things that Grow**. But we do not stop here, for every year further research is made into the deep mysteries of **Plant** and **Seed** life, so that if you favor us with your orders you will know that the varieties of **Vegetable, Flower and Field Seeds** sent out by us are only such as will give you **complete satisfaction**. You need not be a **seedsmen** to realize that you are getting the best—that is our **business** and we **study** it and your interests as well. Never hesitate to plant anything contained in the **smallest packet or largest bag** that bears our **name**.

Have you ever been disappointed in the results of **Seeding** your **Lawn**? You should not be, while seed such as we furnish is on the market. We know if you sow it once, you will be telling your neighbors and friends about it. We can execute your order any day in any quantity from a pint to 100,000 bushels (sounds like an *immense quantity*, doesn't it?). Well, we buy it by the carload and from the most reputable growers, that's why we offer in our **Evergreen Lawn Seed** (and numerous other private formulas) the standard of Quality and Purity.

EXPERT ADVICE! Do you need it? It's yours for the **Asking**. We are at all times ready to give any information pertaining to the achievement of success, concerning anything in our line of business. If your plants are thriving poorly, or the Lawn is not showing as it should, write us at once—the answer will come as quickly as though you had sent us an order. **No charge** for the service. When sending us your order, **DO NOT FAIL** to include in it any article you would desire to get from another seedsmen in town. We will be glad to get it for you, costs you no more, and will pack it in with our own shipment to you.

READ the numerous unsolicited testimonials distributed throughout this catalogue regarding the high quality of our goods.

Catalogues

We issue at various seasons of the year catalogues (the *educative kind*) that apply to the seasonable seasons. If you are a customer or are otherwise interested and do not receive one, kindly advise us at once; they always contain something of interest, showing the most up-to-date methods of keeping and beautifying your garden, lawn, and home. **January**, our spring catalogue is issued. In May we suggest that you look up your rubber hose and lawn sprinklers. Your lawn will appear more beautiful if you keep it watered regularly. **July**, a rather warm month to bother you with reading a list, yet if you wish to have **Celery** next winter and pick **Strawberries** next June, you must read our midsummer issue which tells of our well-grown, transplanted Celery and Pot Grown Strawberry Plants, Early Flowering Bulbs such as Roman Hyacinths, Paper White Narcissus, Freesias, Easter Lilies, etc. The spring and summer have passed, it is time to think of planting the beds of Tulips and Hyacinths, etc. for next spring's display. This catalogue is issued in September, usually a Work of Art, too. The testimonials printed on the cover of this book will tell all about the quality we have furnished to our customers for a long number of years.

Orders, etc.

We endeavor to fill all orders the same day they are received. Of course, during the height of the season, they may be delayed a trifle; if not received within a very reasonable time, "**Write us**," the transportation company is often at fault. Our various departments are arranged in a manner, we believe, faultless, so that orders can be executed with speed and accuracy. Each employee is coached and trained in the various lines of duty which are his—**Flower Seeds**—this department is carefully managed and is under strict personal supervision. Among our **Vegetable Seed** stock are found varieties which cannot be duplicated. **Our stock exclusively.**

TOOLS AND IMPLEMENTS. You could hardly imagine that there was such an immense variety of Horticultural Requisites as we have on sale. The **Quality of Material** used in their construction is the best. They cost no more, however, than those of poorer quality.

The **NOVELTIES** offered in our catalogue this year have been selected with utmost care. Do not fail to include some of them in your order—we advise you, however, to include as well some of the standard sorts of their type for a general supply.

New Dahlia, 20th Century.

Dahlia, 20th Century

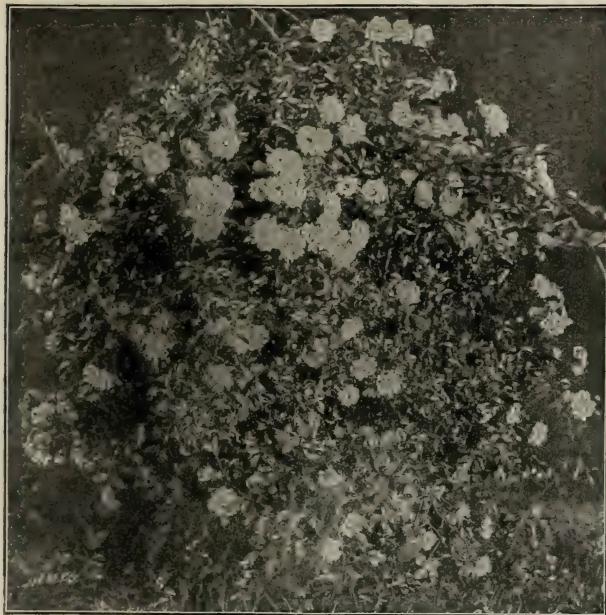

(*The New Orchid-Flowered Dahlia.*)

The flowers are very large, $4\frac{1}{2}$ to 6 inches in diameter, sometimes reaching 7 inches; of perfect form and exquisite finish. The color is intense rosy-crimson with white tips and white disc around the yellow center as shown in the illustration; a superbly beautiful and striking flower. As the season advances, the deep colored zone becomes lighter and the color contrasts exquisitely lovely and can be compared with no other flower except the beautiful orchids. The keeping qualities are unsurpassed; the flowers cut on stems two to three feet long; keep a long time in perfect condition. The past season the cut flowers sold in the open markets at a much higher price than the finest roses. In addition to the rare beauty of the flower, it combines a sweet fragrance, making it the only fragrant dahlia worthy of the name. The plant is five feet tall, a strong, vigorous, branching grower with fern-like foliage, producing the flowers on long stems with buds and foliage. Price, strong, divided, field-grown roots, 50 cts. each; \$5.00 per dozen.

CAULIFLOWER

Blumen-Kohl (Ger.).

Chou-Fleur (Fr.).

Sow for early use about the middle of September or October, in a bed of rich earth, transplant in November and never water, shade and shelter from severe weather, giving them the light and air every mid day, or they may be had nearly as well by sowing the seed in a hotbed in January or February; when the plants are large enough transplant three inches apart in boxes or in other hotbeds until time to plant out; if hardened off, they are seldom injured by planting out as early as ground can be properly prepared, $\frac{1}{2}$ feet apart each way, keep well hoed, and bring earth gradually up to their stems, watering frequently and especially when they begin to head.

Michell's Special Strain Selected Erfurt. One of the earliest in maturation, well known dwarf, for forcing or open ground, produces very solid, pure white heads of the finest quality; ordinary seasons every plant will produce a marketable head. Pkt. 20c.; 75c. quarter oz.; oz. \$2.50; \$8.00 per $\frac{1}{4}$ lb.

Earliest Snowstorm. Earliest and best for forcing; dwarf, with short outer leaves, can be planted two feet apart each way; sure to make large fine heads; must be kept growing constantly, will not stand a check at any period of its growth. Pkt. 25c.; \$1.50 per quarter oz.; per oz. \$5.00.

Water Cress.

WATER-CRESS.

Brumelkress (Ger.). Cresson de Fontaine (Fr.).

The pleasant and peculiar flavor of the water-cress, and also the high price it commands, make it a highly esteemed for table use. Its culture can be carried on anywhere where there is sufficient supply of fresh, pure water; it is not even necessary it should be running water; it can be renewed often enough to keep it clean and pure. It can be grown without water even, in tubs half filled with good soil and kept in a moist, shady position with an occasional watering.

True Erfurt. Pkt. 20c.; 40c. oz.; lb. \$3.50.

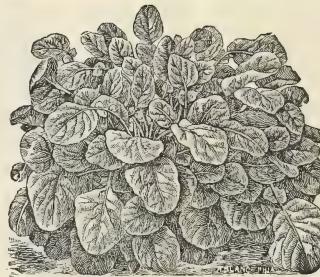

GARDEN CRESS.

Cresson (Fr.).

Sow thickly in early spring in drills one foot apart, and follow every two weeks with a new sowing as it quickly runs to seed. Water-cress should be sown along the margin of ditches, ponds, or better still, of slow running streams. It requires no care except to free it at first from weeds.

Extra Curled or Pepper Grass. Fine flavor, can be cut several times. Pkt. 5c.; 10c. oz.; lb. 50c.

Upland Grass. Perennial, grown in the same manner as spinach; resembles water-cress in flavor. Pkt. 20c.; 50c. oz.

Curled Garden Cress or Pepper Grass.

It is much used as a border plant around lawns beds of canna and grasses. Pkt. 20c.; 40c. oz.

One ounce of seed will produce about 2000 plants.

Sow the seed late in March, or early in April, on fine, well worked soil. Cover slightly, or better still, roll or press it. Cucumber.

Concombre (Fr.)

One ounce of seed will plant about five hills, or two pounds per acre.

For early use sow in hothouse on small pods overwintered, or in small pots plunged in earth. As soon as danger from frost is over, transplant with root, so as not to disturb the plants, into hills in the open ground. For general crop sow from about the first to the middle of May in rich, mellow, warm soil. Use a shovelful of well-rotted manure in each hill and cover it two inches deep with fine earth. On this sow the seed, about eight or ten seeds to a hill; cover one-half inch with earth and press down. When danger from bugs is past thin out to four plants to a hill. For pickles, plant from June to middle of July.

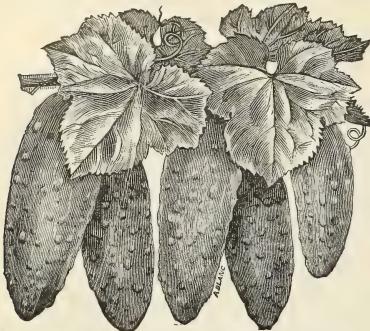

Livingston's Evergreen. Very hardy and probably the most prolific of all varieties. Very early, and the cucumbers retain their beautiful green color longer than any other sort. It is one of the very best varieties for slicing. Pkt. 5c., 15c. oz., $\frac{1}{4}$ lb. 35c., \$1.25 lb.

Mitchell's Fresh Tested Vegetable Seeds

Erbsen (Ger.)

PEAS

Pois (Fr.)

ONE QUART TO 100 FEET OF ROW.

PEAS succeed best in light, dry, loamy soil. Early and dwarf sorts require richer soil than the late varieties. If manure is used, let it be old and well rotted, or there will be a rank growth of vines with few pods. Sow the early, smooth, round sorts as early in the spring as the ground can be worked. Seeds of wrinkled varieties are more liable to rot if the ground is cold, and must be planted later. Sow seeds in single rows, three feet apart, for dwarf sorts, and four for tall sorts, or in double drills, six to eight inches apart, one inch apart in the drill, and not less than four inches deep, for late sorts seven to eight inches deep. Deep planting prevents mildew.

If wanted by mail add to list price for postage 5 cts.
per pkt.; 8 cts. per pint; per quart 15 cts.

POTATOES.

PLANT TEN BUSHELS TO THE ACRE

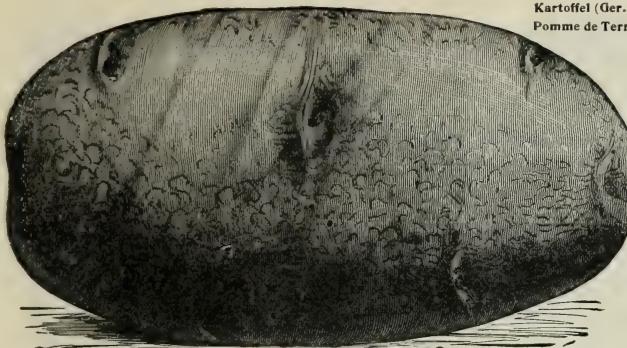

The soil best suited to the potato is a rich, sandy loam; being of a light texture it is easily worked and a good condition of manure, if stable manure is to be used it should be well rotted and not allowed to come in contact with the tubers. On no other crop are the results from the use of manure harshest so manifest as on the potato; almost invariably the tubers are lighter, smaller and free from starch, and the distinctive influence of worms. This by fertilizing at planting time, super-phosphate of lime, and bone dust, for heavy and wet soils especially, as they promote growth, and at the same time, prevent disease. Plant as early in spring as the ground can be thoroughly worked, in rows three feet apart and one foot in the rows.

LAWN GRASS SEEDS

Our Grass and Clover Seeds are of the very finest quality, extra clean and free from weeds, and can be relied upon to give the best of satisfaction. We have a large number of unsolicited testimonials from customers who have sown our seed.

We make a specialty of supplying Country Clubs with the proper grass seed for Golf Links, Tennis Courts Etc., Etc. Special information as well as Special Prices will be cheerfully given. We can refer to a number of the leading Clubs whom we supply.

MICHELL'S "NONE SUPERIOR EVERGREEN" LAWN GRASS SEED produced one of the finest lawns in Pennsylvania, at the Country Residence of the late Frank Thomson, President of the Pennsylvania R. R. at Merion Station.

Our Evergreen Lawn Seed has become the Standard of excellence and purity.

HOW TO MAKE A LAWN.

Some previous cultivation, or at least a thorough turning over should be given. A clayey loam is the best foundation for a good lawn. Let the surface be graded to the level wanted in all parts and well rolled—a light raking following this will prepare for the seed sowing, which should be done as early in the spring as the ground can be worked, provided the ground has not already been prepared in the fall. The very best time, the ground being in order, is about April 1st.

QUANTITY OF SEED TO SOW PER ACRE.

For newly made lawns we recommend sowing 4 bush. or 80 lbs. per acre; for renewing old lawns about 2 bush. will be sufficient. Do not be afraid to apply sufficient seed; for the young plants are but small and if thick, cover the ground better and make a smoother and more even turf. Mowing should be done at least once a week in favorable growing weather, and even in dry weather it should be cut twice a month. Do not allow the clippings to remain on the ground, except they are very short.

RELIABLE INFORMATION.

We are at all times ready to give any advice about the Lawn, Golf Ground, Polo Field, etc. It's our business, and we will give it in a way that will lead to success. The largest estates, etc., have their lawns seeded with Michell's formulas of seed.

LAWN TOOLS, ETC.

Our stock, we know, is the most complete. Come and look it over and be convinced. **RAKES, ROLLERS, MOWERS**, and all the **newest devices**, in a variety that will surprise you—the prices are reasonable.

P. S. We strongly recommend using Michell's Pure Bone Meal and Canadian, Unleached Wood Ashes, for top dressing Lawns.

Michell's Fresh Recleaned Grass Seeds

MICHELL'S SPECIAL FORMULA PERMANENT PASTURE AND HAY GRASS SEED.

This special mixture is made up after careful study of the very best permanent, hardy varieties of grasses, such as will produce a quick growth and of a permanent nature. All the different varieties contained in this special formula are especially adapted for the purpose, and can be relied upon to give the very best results. Few farmers realize the value of sowing our **Permanent Pasture Grass Seed**, the results derived from it are remarkable. It is not an annual that must be sown every season, but a permanent turf is procured, something that will give returns for years to come. As a hay producing crop it has few equals; cattle can still graze on it after the crop has been harvested and yet find sufficient to satisfy their wants. In few words it is the **cheapest and quickest permanent crop you can put on the field**. The testimonials received from those who have sown it are numerous indeed. We make up special formulas, for low and high, for shady and sunny locations, also for heavy and light soils. We recommend this mixture either for making entirely new pasture fields, or for replenishing partly worn-out pastures.

20 lbs. per bushel, \$3.00 per bu.; (5 bu. lots \$2.75 per bu.); (10 bu. lots and over at \$2.65 per bu.)

2½ bushels per acre is the proper quantity to sow on new fields, whereas one to 1½ bushels per acre is sufficient for re-sowing and replenishing old fields.

Newer Asters

Of recent introduction of the "COMET TYPE."

1107 **"Empress Frederick."** A variety classed among the finest of dwarf Asters of the Comet type. Bearing flowers of the purest white often 12 inches in circumference and of the most desirable globular form, producing as many as 8 to 12 blooms on a plant at one time. A special feature is its robust growth, which makes it very desirable as a pot plant. Pronounced the best of the recent additions to the Aster family. Price per pt. 15c. 50c. for 4 pkts.

1120 **King Humbert, Pure White.** In this beautiful novelty the acme of perfection in large-blooming dwarf Comet Asters has been attained. The plants form compact bushes and bear magnificent globular pure white flowers of the genuine long-petaled Comet type, but of extraordinary size, sometimes surpassing 5 inches in diameter. It is extremely seldom that any of these flowers show a yellow centre, a fault often found with the old Giant Comet Asters. Will be unsurpassed in value as a pot-blooming, also garden Aster. 15c. per pkt., 4 pkts. for 50c.

FRINGED PERPETUAL BLOOMING "ALLEGHENY"

(Semi-Double.)

Blooms the first season from seed sown early. Its points of merit are: The novel shape of the flower and the fringed edges, and its large size, from 5 in. to 7 in. diameter. In addition hereto, the color is striking, and the appearance of the petals convey the idea that they were made of crushed silk, on account of the delicate colors. The **immunity from disease is a good point**, and the fact that at each axis are 3 to 4 buds, which all develop, is also a good point; this prolongs the blooming season. They come 90 per cent. true from seed.

Coldwell's New Motor Lawn Mower.

Coldwell's Motor Lawn Mower

Is especially adapted for use on Parks and Golf Grounds, the latter of which it is especially recommended for, as its great weight and fineness of cut, leaves the ground in the very best condition for the game.

As a STEAM ROLLER FOR LAWNS it has no equal; its weight is just right for this work. When so used the lawn mower part is lifted by means of a lever and left suspended free from the ground.

The Motor (8-horse power), of the latest improved design, is the same as is used on an up-to-date automobile.

The machine complete and ready for operation weighs about 3,000 pounds. It cuts a swath 40 inches wide, and travels at the rate of from 250 to 500 feet per minute over any ordinary grade.

As a PORTABLE ENGINE to be used for pumping water, sawing wood, etc., it is perfect.

Considering the amount, quality and variety of work this machine will do, we consider it the most economical machine that can be used on a large place.

We guarantee that a man can do as much cutting with this machine in a single day as can be done with two or three Horse Mowers in the same time.

PRICE, \$1,500 NET.

MR. WM. KLEINHEINZ, gardener to P. A. B. WIDENER, Esq., Elkins, writes as follows:

The Autocdolite Steam Lawn Mower and Roller is doing excellent work on our place. Takes the place of two or three regular horse mowers. One great advantage of this 3000 pound mower is that there is no obnoxious tall grass in our lawn wherever we have used it. I can very highly recommend it.

"PLANET JR." FARM AND GARDEN TOOLS

Space will not permit our showing and describing all of the "Planet Jr." tools, but we will send a fully illustrated catalogue free for the asking to any who desire it. "Planet Jr." goods are standard machines; the best; yet great improvements have been made for 1903. You can rely on getting a bottom price from us on any of the "Planet Jr." Tools.

"PLANET JR." No. 3, Hill Dropping Seed Drill.

We all know that a seed sower that does not drop in hills is fast becoming a thing of the past. Why? Because all crops that are to be grown from seed and thinned to a regular stand should be planted in hills at just the distance apart the plants are desired; for in drilling, unless the seed is sown necessarily thick, there will not always be a plant in the proper place, and the crop is therefore irregular. This means that a seed sower should drop in hills, and at various distances. The new No. 3 "Planet Jr." drops at 4, 6, 8, 12 and 24 inches apart, and also in a continuous row, without injury to the seed and can be changed from hill to hill drill instantly, or from one distance to another very quickly. The index is at the top of the handle, with hair breadth adjustment and instantaneous cut-off.

"PLANET JR." No. 4 Combined Hill Dropping and Single Wheel Seeder

This is exactly the same style of seeder as No. 3 "Planet Jr." Hill Dropper. It is smaller in capacity, though still of good size, holding two quarts. It drops in hills at 4, 6, 8, 12 and 24 inches apart and in drills any thickness, handling the smallest pieces of seed perfectly, and is simple, durable and very light running. It is the only one of its class that is simply raised by the handles. The drill is detached and the tool frame substituted by moving but one bolt. It then becomes one of the most admirable Single Wheel Hoes of the "Planet Jr." family.

Price complete \$10.00.

As a Drill only \$8.00

"PLANET JR." No. 11 Double Wheel Hoe, Cultivator, Rake and Plow

This tool combines in itself the good points of its predecessors, with valuable new ideas. It has 11-inch wheels which can be set at four different distances apart; the frame is malleable, with ample room for tool adjustment, and can be set at three different heights. The handles are adjustable, being attached to the ards, are entirely undisturbed in making changes of the height of frame, width of wheels or in the adjustment of the tools themselves. The ards of itself unusually high. The design of the frame is novel, allowing all changes of tools to be made without removal of the nuts from the standards.

A pair of model rakes and a pair of new style hoes are added to the usual equipment—seven pairs of tools in all. The variety of the work possible with this machine is incredible, covering the whole range of wheel hoe work, both in the garden and on the farm, and has our unquestioned endorsement.

Price complete \$8.50

"PLANET JR." No. 12 Double Wheel Hoe.

This tool is identical with No. 11 except that it has a less complete equipment, as shown in the cut, but at a correspondingly less price. The set of tools with No. 12 is what gardeners need most.

Price \$6.50

The "PLANET JR." No. 13 Double Wheel Hoe

This tool is the No. 11 with 6-inch hoes only, this pair of tools being most generally used at all seasons. Any or all of the No. 11 tools may be added at any time, and are sure to fit. Price \$4.50.

"PLANET JR." No. 25 Combined Drill and Double Wheel Hoe

This new combined machine is intended for those who have large enough acreage to use a Double Wheel Hoe to advantage, and yet prefer not to buy a separate machine. It holds 2½ quarts, and has 11½ inch wheels, which are just the right size. As a drill it is almost identical with the No. 4, and as a wheel hoe it is identical with the "Planet Jr." No. 12 Double Wheel Hoe. The change from drill to double wheel hoe takes but a moment, and the combined combination is one we can heartily recommend and guarantee satisfactory.

Price
\$13.00

"PLANET JR." No. 17 Single Wheel Hoe, Cultivator, Rake and Plow

This latest and best Single Wheel Hoe has an 11-inch wheel with broad face, and a conveniently arranged and very valuable set of tools. It is very light, strong and easy to manage, and is a great help to the gardener, and is the most perfect wheel hoe for market gardeners and private places. Frame changes in height; and the wheels to the other side of the frame, to allow of hoeing both sides of the row at one passage.

Price
\$4.75

The "PLANET JR." No. 18 Single Wheel Hoe.

With the same frame and handles as No. 17, it has one pair of 6-inch hoes only, but they are the most constantly useful through the season of all the list. The remainder you buy as wanted. Price \$3.25.

The "FIRE-FLY" PLOW.

This tool is invaluable for those having small gardens. The mould-board is tempered and polished steel. The depth may be changed very quickly. Price \$2.25.

"PLANET JR." Harrow and Cultivator.

Price, Plain \$5.30 with Wheel, \$6.40 Complete, \$8.00.

This tool rapidly grows into favor with farmers, market gardeners and others. It has a high frame and the chisel-shaped teeth cut an inch wide each. The foot lever pulverizes a capital addition for preparing ground for the seed bed, for plant setting, and controls the depth of the rear teeth. Hand levers regulate both width and depth while in motion; it contracts or stretches, and expands to 32 inches. It cultivates deep without throwing dirt upon the plants, and the rear teeth are round - threaded teeth turn strawberry runners without injuring them. For cutting strawberry runners we make a special attachment, consisting of a ten-inch flat steel disc mounted on an outrigger. Strawberry Runner Cutter Attachment extra \$1.60.

"PLANET JR." No. 8 Horse Hoe.

Price as in cut \$4.00.

Without Depth Regulator \$7.00.

No. 9 Horse Hoe, complete \$5.50.

No. 10 Horse Hoe, complete \$6.50.

Probably no other ploughing machine is so widely known as the "Planet Jr." Combined Horse Hoe and Cultivator. It is so strongly built as to withstand incredible strain, yet it is light and easy to handle.

Every part is perfected to make the tool comprehensive to the intelligent farmer, who knows the best is always the cheapest.

INDURATED FIBRE Flower Pot Saucers are light and not easily broken.

Far cheaper in the end and better in every way than the earthenware article. Are not porous, and will protect wood-work, tables, etc., on which plants are to stand.

The small-sized **INDURATED FIBRE** saucers cost very little more than the ordinary earthenware—while the larger ones (10 or 12 inch and up) are actually cheaper in first cost than anything else.

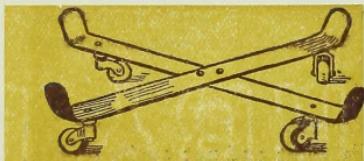

INDURATED FIBRE-WARE VASES AND POT SAUCERS will prevent 90% of the usual waste of pottery around the greenhouse. They protect the carpets or floors from all moisture and damage, and are as easily moved as a table or rolling-stand—no matter how heavy the plant. The rolling stands are particularly valuable for plant and palm-displays at social functions. Florists and decorators will find the SAUCERS and ROLLING STANDS particularly suitable for planter and palm-displays at social functions. They protect the table, stands, decorations, etc., from moisture and mold. A non-conductor of heat and cold—light weight and has no joints or seams. It is absolutely impervious to moisture, as the water will not creep through the tubes or over and down the sides.

Indurated Fibre-Ware

Fibre-Ware Rolling Stand

is mounted upon ball-bearing casters, and furnishes an easy and ready means of moving heavy plants in permanent or temporary locations.

The four smaller sizes have a detachable and strongly made metal base so

that a new dish may be used in place of one damaged or broken, the enameled Steel Stand and Casters being separate.

The two larger sizes have the Casters securely attached to the shallow dish.
